

TRUESCAN

Verification System

Buist Automation introduces the TrueScan™ Verification System; a barcode comparison system designed to increase quality assurance in packaging to product verification.

Byron Center, MI
October 5, 2007

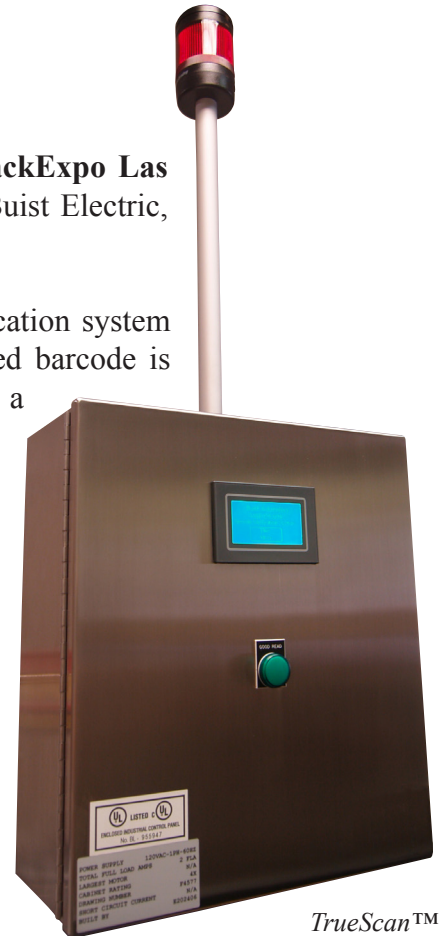

Buist Automation and its TrueScan™ Verification System will be at the **PackExpo Las Vegas, Oct. 15-17, 2007, in booth 5170**. Buist Automation, a division of Buist Electric, specializes in controls and automation systems for the packaging industry.

The TrueScan™ Verification System system is a stand-alone barcode verification system designed to scan and verify up to 1,200 barcodes per minute. Each scanned barcode is compared to a pre-programmed barcode for verification. Upon reading a mismatch, the system automatically shuts down production equipment.

Standard features included with the system are:

- Data collection (via HMI)
- Stand-alone control cabinet
- Auto/manual barcode recognition learning
- Scan quality display
- Multi-level password protection
- Adjustable scanner head mounting bracket
- Bad scan rejection (dry contact provided)
- “Sleep Mode” (increases scanner life)
- Maintenance friendly design
- UL listed assembly

“... scan and verify up to 1,200 barcodes per minute.”
